This work has been carried out within the framework of the EUROfusion Consortium and has received funding from the Euratom research and training programme 2014-2018 under grant agreement No 633053. The views and opinions expressed herein do not necessarily reflect those of the European Commission.

PART II: Some relevant information

OPEN RESEARCH EUROPE

-> **PLATFORM NOT AVAILABLE FOR EUROfusion authors**

EURATOM Research and Training Program is not part of the deal

EC is looking into this; can become available 2024 (? latest)

Plan S leader Johan Rooryck at ESFR meeting:

-> Authors should request to use CC-BY license

from Me to Everyone:

Thank you. Do you have any statistics in how many cases is the cc by licence accepted by the publishers?

02:26

from Johan Rooryck to Everyone:

"Thank you. Do you have any statistics in how many cases is the cc by licence accepted by the publishers?" We know that the RRS language with the CC BY statement has already been used 500x by authors. Like I said, the publishers rarely refuse the CC BY statement, they just put pressure on the authors to move to a journal with an APC, or force them to sign an additional contract that contradicts their funder agreement. This does not happen very often yet, though, and it is too early to have proper statistics. But we do monitor the situation closely, and are considering measures to reinforce the Rights Retention Strategy with CC BY claimed on the AAM.

02:38

NUCLEAR FUSION

-> Splitting the journal does not seem to be workable

-> Transformative agreements are discussed with several countries/funders etc

-> CC-BY IS NOT accepted by IOP

- I think we should create an action (on our working group) to establish what functionalities/processes that we have with the present editors would need to be re-established if moving to a completely open publication platforms.
- On the same line, another useful action for the group would be to establish the pro/cons of using existing green/diamond journals.
