

# WPSA Enhancement Projects: Summary of 2022 Plans

WPSA General Meeting (04-05-2022)

J. Ayllon-Guerola and the WPSA Coordination Team

This work has been carried out within the framework of the EUROfusion Consortium, funded by the European Union via the Euratom Research and Training Programme (Grant Agreement No 101052200 — EUROfusion). Views and opinions expressed are however those of the author(s) only and do not necessarily reflect those of the European Union or the European Commission. Neither the European Union nor the European Commission can be held responsible for them.

### EDICAM (EK-CER)

- First EU diagnostic on JT-60SA
- Commissioning of the EDICAM camera completed, without plasma, remotely from Hungary
- Participation in Integrated Commissioning during 2022 (SA.D.02 Grant Deliverable 2022 ):
  - Camera operation with plasma (exploitation and functionality testing)
  - Support machine commissioning

### Divertor Cryopumps (KIT)

- Procurement Arrangement (PA) signed (2021)
- Manufacturing phase ongoing:
  - Some components already delivered to Naka
  - Process monitoring during 2022
- Final delivery expected by end of 2022 for installation starting in 2023 (ME1)

## VUV Spectrometer (ENEA-RFX)

- PA to be finalized and signed during 2022
- Main components under manufacturing/procurement
- Test bed preparation ongoing (Frascati)
- System installation expected during 2023 (ME1)

## Thomson Scattering System (ENEA-RFX)

- PA signed and ongoing
- Manufacturing/procurement of all components launched (monitoring during 2022)
- Components delivery expected by end of 2022 (possible delays due to international sanctions)
- Expected system components installation:
  - Outside torus hall end 2022
  - Inside torus hall during 2024 (ME1)

## Pellet Launching System (MPG)

- Manufacturing of pellet sources (fuelling and pacing) ongoing (monitoring during 2022)
- Centrifuge manufacturing contract awarded:
  - KoM by mid 2022
  - Delivery expected by mid 2024
- Test bed ready at IPP (PLS to be tested by end of 2023)
- Shipment to Naka expected by late 2024

## Massive Gas Injection System (MPG)

- PA to be finalized and signed during 2022
- Design approval from Ibaraki prefecture obtained
- Most of the components already manufactured:
  - MGI valves manufacturing ongoing
  - Testing bed ready (at IPP Garching)
- System installation planned for 2024

## Fast-ion Loss Detector (University of Seville)

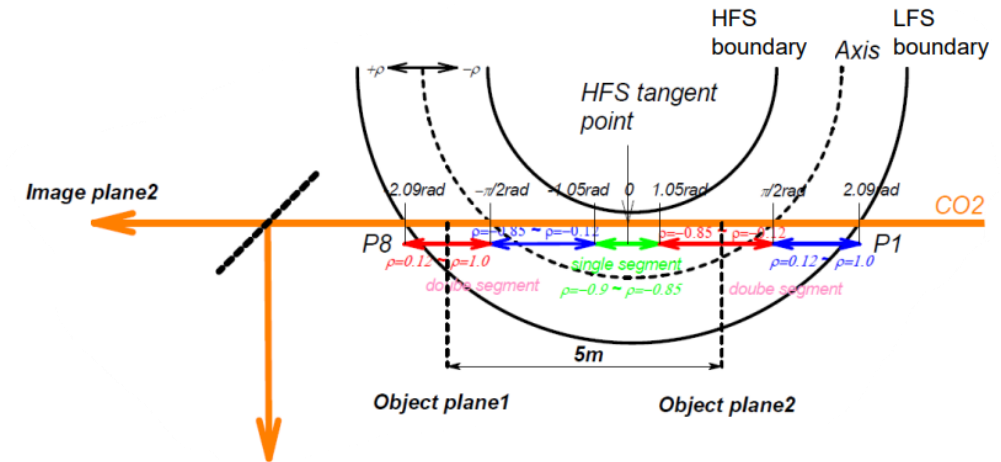

- PA to be finalized and signed during 2022
- Completion of final design during 2022:
  - Finalizing mechanical design (iteration with QST/F4E)
  - Complete camera shielding box design (MCNP assessment about to start)
- Start procurements by end of 2022: new funding scheme being defined between EUROfusion and F4E
- Installation expected during 2025 (ME2)

### Tangential Phase Contrast Imaging System (EPFL)

- Mechanical design update according to new QST requirements
- Definition of approximate budget
- Tentative schedule elaboration for project completion (installation included)

### Doppler Reflectometry System (CIEMAT)

- Progress on mechanical design description
- Requirements estimation for baseline system with steering mirror
- Tentative schedule for project completion (installation included)

## Gamma-ray Diagnostics (ENEA, UKAEA)

- Preliminary specification of gamma-ray detectors based on first assessment of expected signal-to-background ratio
- Definition of a scientific case: benefits of gamma-ray diagnostics in energetic particle studies for all research phases

## Neutron Diagnostics (VR, ENEA, IPPLM)

- Continue with scenario replication for studies on performance and integration of compact spectrometer
- Neutronics simulations (MCNP):
  - N&G fluxes and spectra in relevant areas (detectors locations, components shielding,...)
  - Pre-analysis of measurements with Ionization Chambers and Diamond detectors
  - Studies on dosimetry systems

## EC Stray Detection System (ENEA)

- Complete EC beam tracing analysis considering final antenna configuration
- In-vessel ECH sensor study (performed in collaboration with IO and QST)
- Engineering integration study, prototyping, basic sensor testing and calibration
- Elaborate tentative commissioning plans

ITER EC stray radiation sensor CAD model

## Beam Emission Spectroscopy System (EK-CER)

- Lithium and heating BES diagnostics:
  - Performance analysis update with updated plasma configuration
  - Elaborate project plan and cost estimate based on the feasibility study

D-BES – Set-up 8B beam on port 16. Observation on P-17

## Ultra-fast Reflectometry Upgrade (CEA)

- Continuation of practical implementation studies:
  - Identification of suitable installation locations
  - Study of waveguide routes (type of waveguides and antennas, distance to plasma edge...)
  - Analysis of a possible space sharing with the DR system (CIEMAT)
  - Provide estimated budget and timeline for project execution

JT-60SA  
 $R = 3 \text{ m}$   
 $a = 1.18 \text{ m}$   
 $B = 2.3 \text{ T}$

Similarities with JET

**3 frequency bandwidths are required**

Q-band (33-50 GHz)

V-band (50-75 GHz)

W-band (75-110 GHz)

## Infrared Imaging System (CEA)

- Identification/study of possible improvements for QST IR diagnostics in terms of mechanics, optics and IR data use for physics studies and machine protection
- Identify/define requirements for applications in future divertors (carbon, carbon cooled and tungsten) and PFC

# FP9 Enhancement Projects: 2022 Plans (5/5)

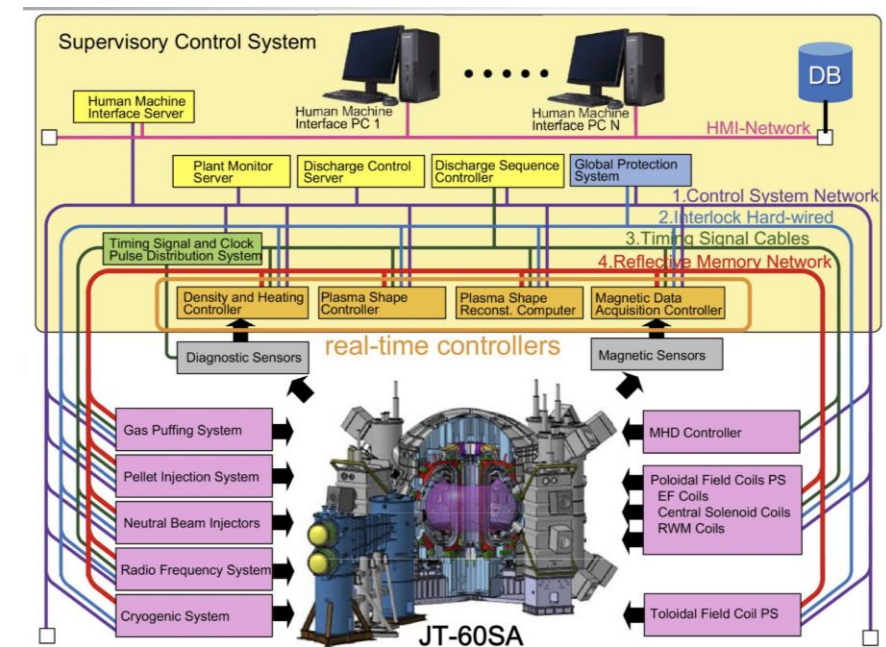

## Langmuir Probes Specifications (CEA)

- New activity in 2022 (collaboration with WPDIV and F4E)
- Support on definition Langmuir probes specifications compatible with actively cooled divertor

## Remote Access Architecture (ENEA, CEA, IPP)

- Support to the development and test of the JT-60SA remote participation tools
- Analysis & planning of actions needed to setup effective remote participation to JT-60SA
- In line with SA.M.02 (Grant Milestone in 2022)

# Objectives for 2022

## FP8 Enhancement Projects

- Complete procurement of most projects and prepare installation in 2023-2024
- EDICAM: Contribute to Integrated Commissioning II (SA.D.02 Grant Deliverable 2022)

## FP9 Enhancement Projects

- Progress in Remote Access (SA.M.02 Grant Milestone in 2022)
- Projects mature enough (TPCI, DR, EC-Stray): propose to move to implementation phase depending on priorities being defined by Experiment Teams (EUROfusion-QST)
- Rest of projects: Complete/improve feasibility studies to support prioritization being defined by Experiment Teams
