# Open Source

- **Benefits to making IMAS infrastructure open source**
  - Lowers barrier to using, developing, and validating which is of benefit to all users
  - Can be used for international IAEA databases, etc.
- **IMAS infrastructure is a mixture of IO GIP (e.g. Data Dictionary) and background IP licensed from EU (e.g. Access Layer)**
- **IO preparing to ask ITER Council for permission to release IO's IMAS GIP as Open Source but this only makes sense if the EU will also allow EU background IP to be released under an open source licence**
  - E.g. EUPL as applied to SOLPS-ITER developed under TA with F4E

## **Proposed Action**

**EUROfusion to establish that EU BIP can be released as open source**
