Discussion

P. Ulbl, et al. *Nucl. Fusion* (2025).

- How do we proceed (e.g. RT-02, EU-US Theory/Simulation ELM-free Meeting, annual zoom workshop)?
- What are the main risks that still need to be addressed for a NT DEMO?
- Are AUG and JET results consistent with other tokamaks?
- What GENE-X simulations would be useful^[Ulbl]?
- What are the knowledge gaps (e.g. double-null NT, impurity transport, *particle transport, ITG vs. TEM*, EM turbulence, pedestal stability)?
- What do we need to convince the community of?
- Anything else?

Thank you very much for
your time and attention.

I hope you enjoyed our discussions and
the visit to Lausanne, short as it was.
